Two briefs, one designer

Job Market Insights Feature

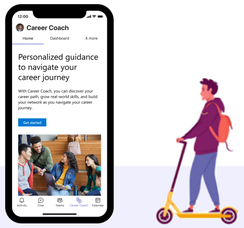

How might we plug LinkedIn's Job Market Insights widget into Career Coach to **increase usage of the Job Markets Insights API**?

Designer

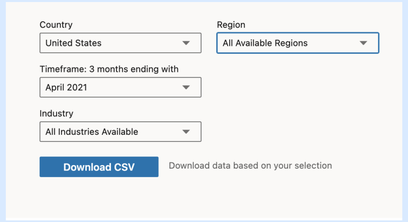

How might we help Universities gain insight about their students so that they can **help their students achieve their career goals? Understand how they are using the Career Coach?**

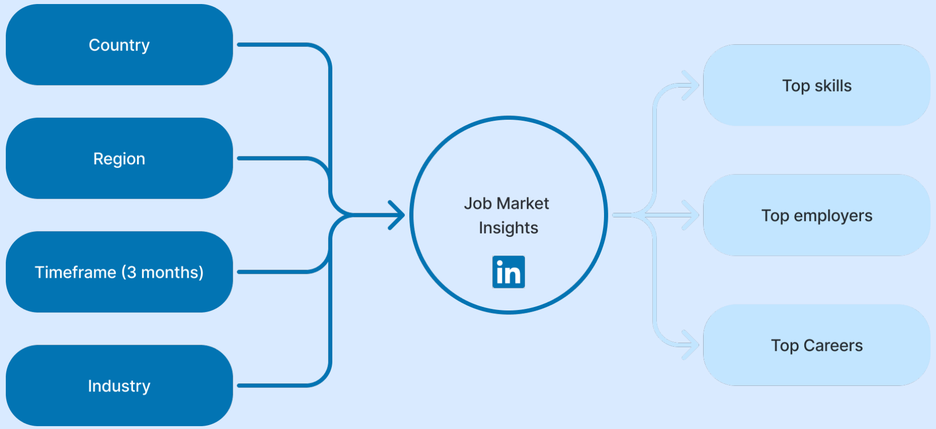

Student Data Insights Feature

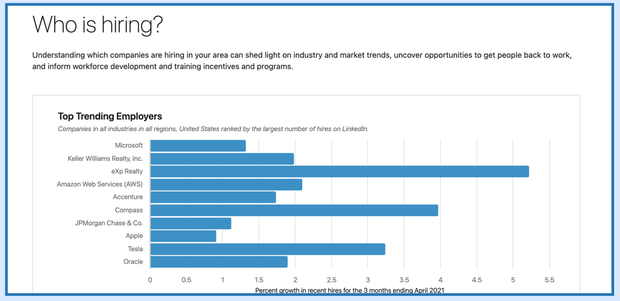

How might we **increase the number of universities using Career Coach**?

The brief — What we were working with

Total number of **resume uploads by students**

Top activities completed

Top goals completed

Top skills students have from **resume**

Number of **sessions**

Top learning courses launched by students

Top interested skills

Top interested careers

Number of **saves for [career]**

Top skills students have from **transcript**

Total number of **transcript uploads by students**

Skills alumni list on profile

Field of study alumni list on profile

Location alumni list on profile

User Testing Round 1

1. Have them use the existing Job Market Insights widget

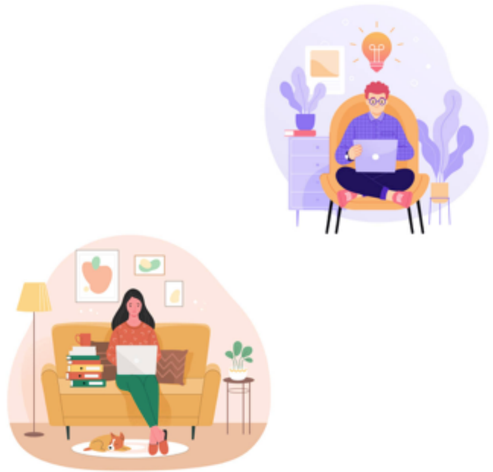

1. Recruit a diverse group of faculty
2. Send them the link to LInkedIn's Job Market Insights

User Testing

Round 1 with faculty

Observe and ask questions like:

1. Why did you select that from the dropdown?
2. What information is important?
3. What do you wish this page had?

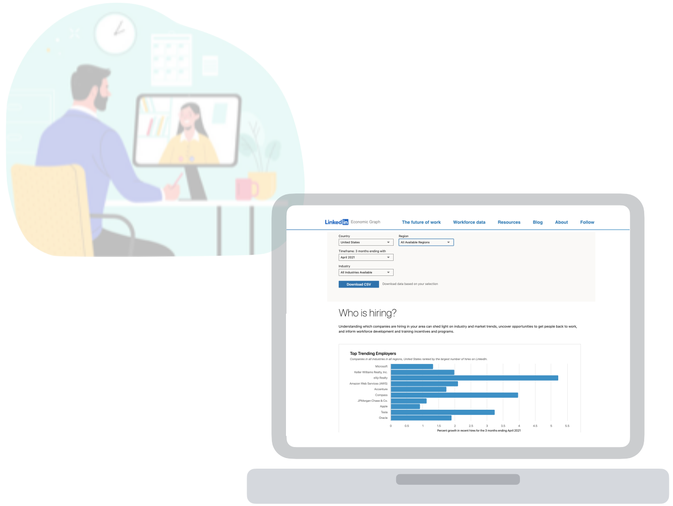

2. Think aloud as they use the dropdown and navigate the tool

User Testing

Round 1 with faculty

Example Questions:

1. What does this widget help inform?
2. What is your overall goal using this tool?
3. How do you feel you can best support your students navigate their career journey?

3. Follow up questions

What Universities told us

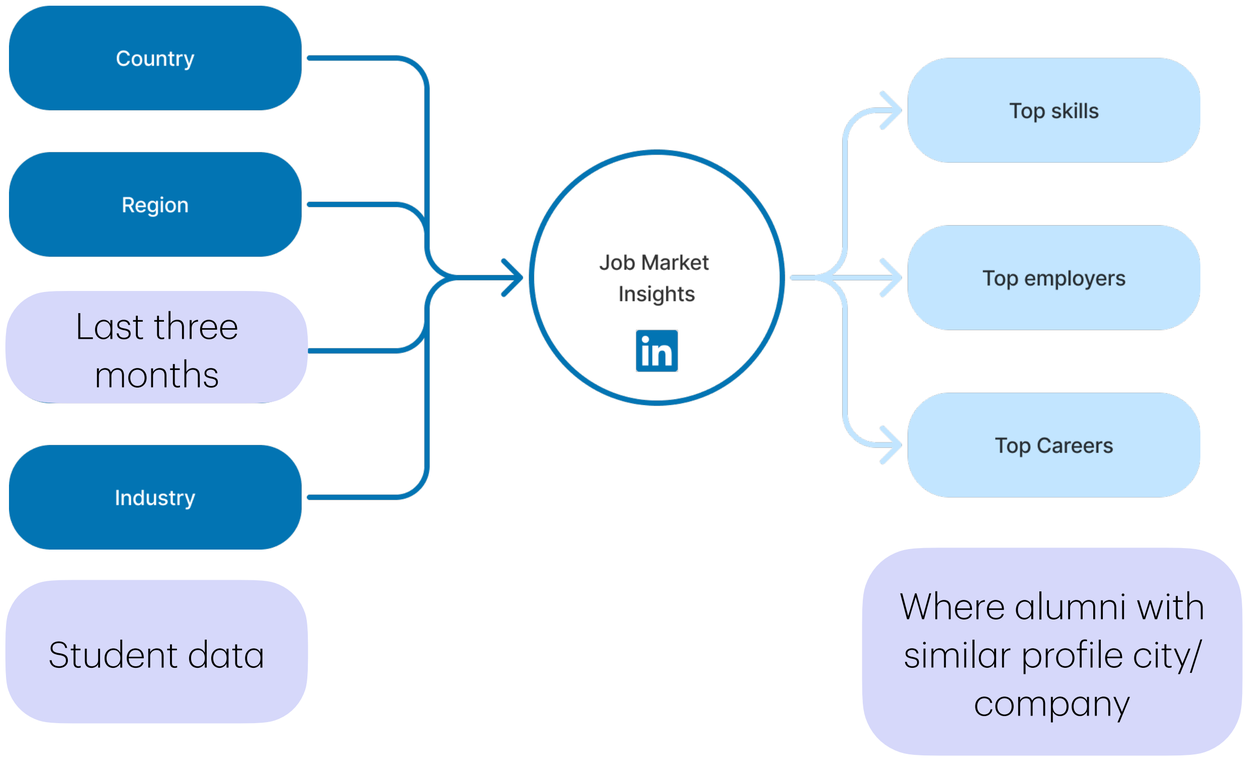

Key Takeaway: Student data and job market data had to live together

1. How teachers/faculty use the Job Market insights data **depends on students' major and skills (student data)**

2. All teachers wanted to see **latest data (latest three months)**

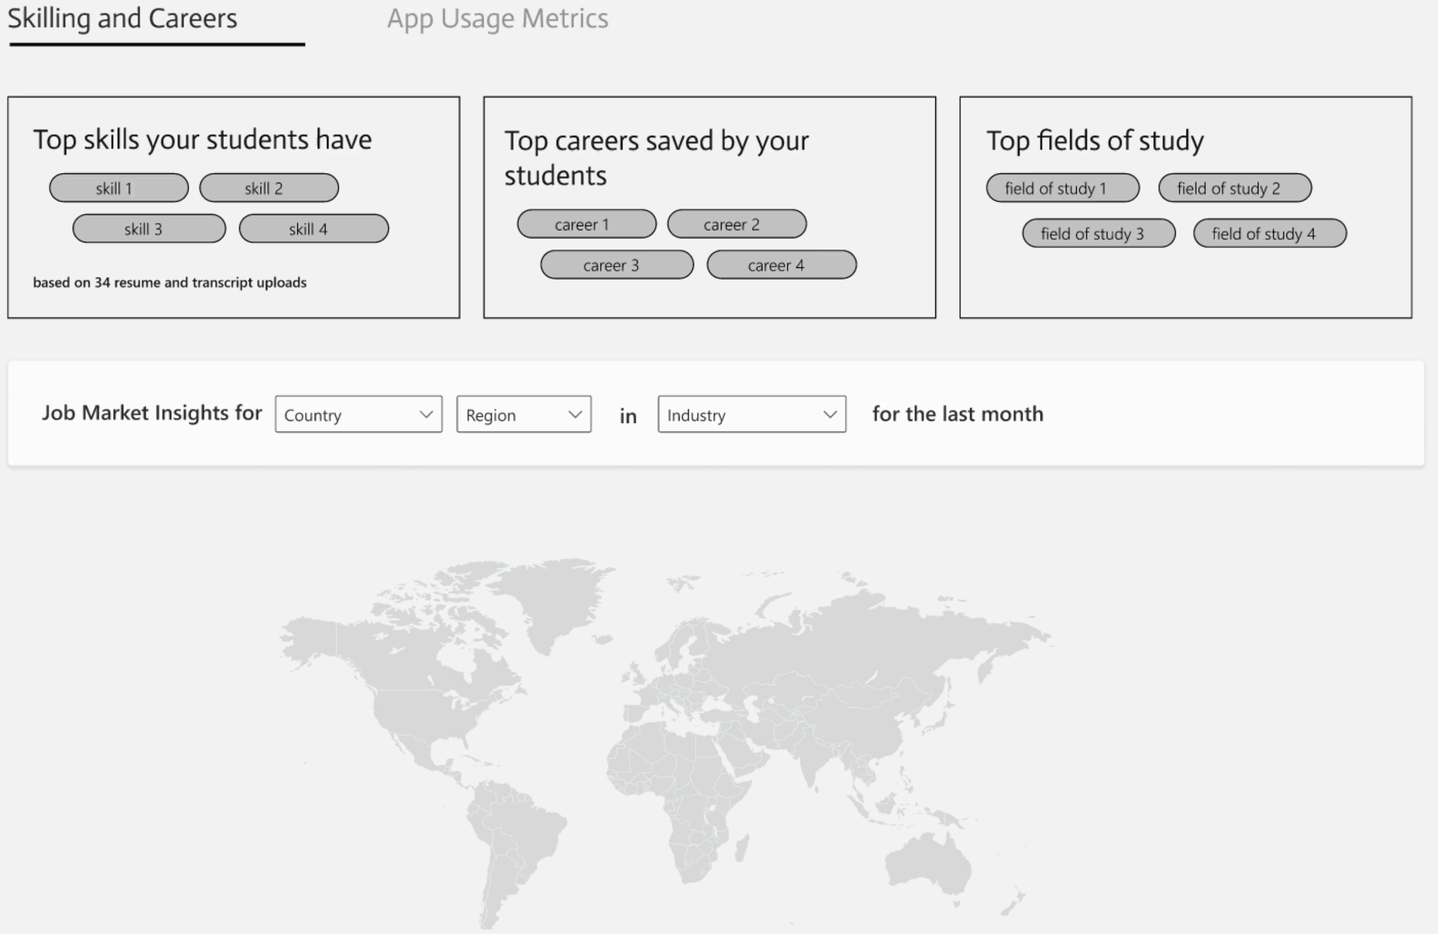

3. Students **visa situation** and dream city plays a factor into student major/interests

4. A desire to **see where their past students work and live** to then suggest a path forward for current students

Early Iterations

Wireframing

Design Readout with Team

Key Feedback:

- Finally **got manager buy in** that combining both Job Market Insights and students' Career Coach data is a good idea
- Follow ups for our Eng team x Teams Eng team on **technical feasibility** for:
  - **Can we have JMI and student insights in an interwoven view (same tab)?**
- Heading in the right direction, but it is **not INSIGHTS yet, only data. Placing relevant data side by side is not enough**

User Testing Round 2

Card Sort

Most important

By field of study

By year in school

Where are alumni?

Top companies

Top student skills

Knowing if skill is from transcript

Knowing if skill is from resume

Top cities

Top skills

Least important

Key Finding:

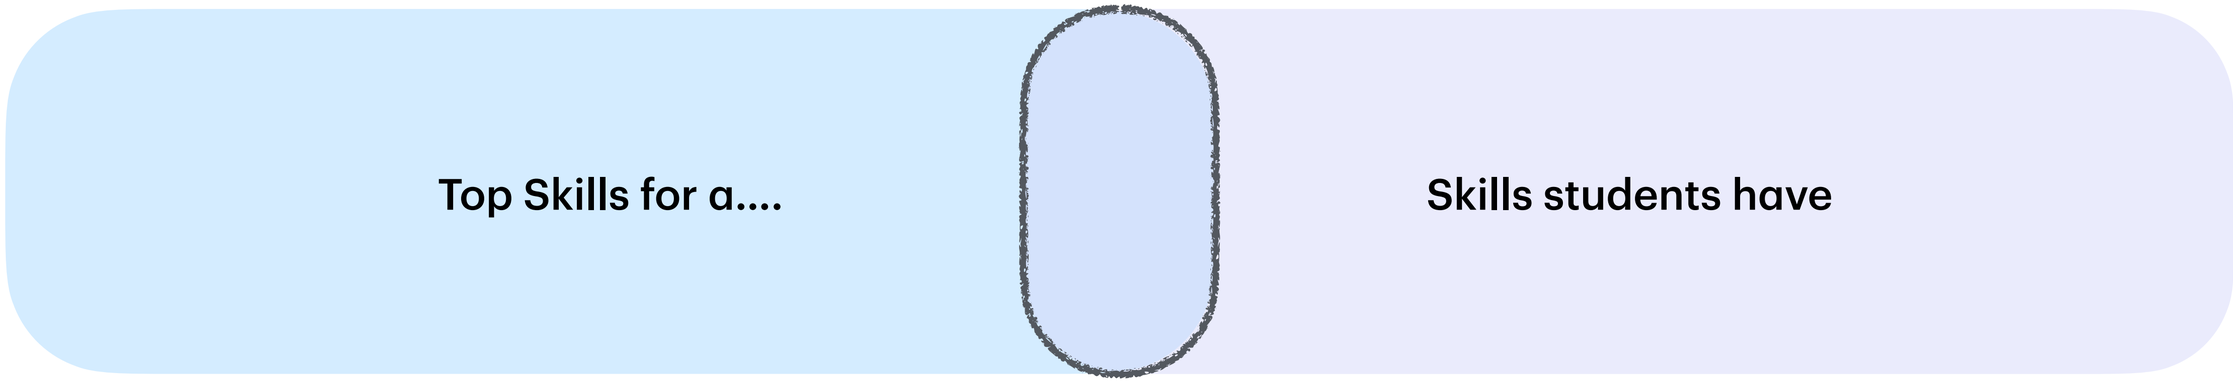

- **Identifying skill gap** is GOLD.

Other helpful findings:

- **Breakdown by year and major** was the most important to see what top skills and interests are.
- For Job Market Insights, latest was greatest, but for **student data, they want to be able to see timeframe**
- To know where the skills are coming from, resume or transcript is secondary

User Testing Round 2

Card Sort

career
dream company
dream city

Identifying student readiness

suggest activities

suggest LinkedIn connections

The pivot

What do my students know and what are they missing? What's standing between them and where they want to go?

Skills students have

Country

Region

Industry

Job Market Insights

Top skills

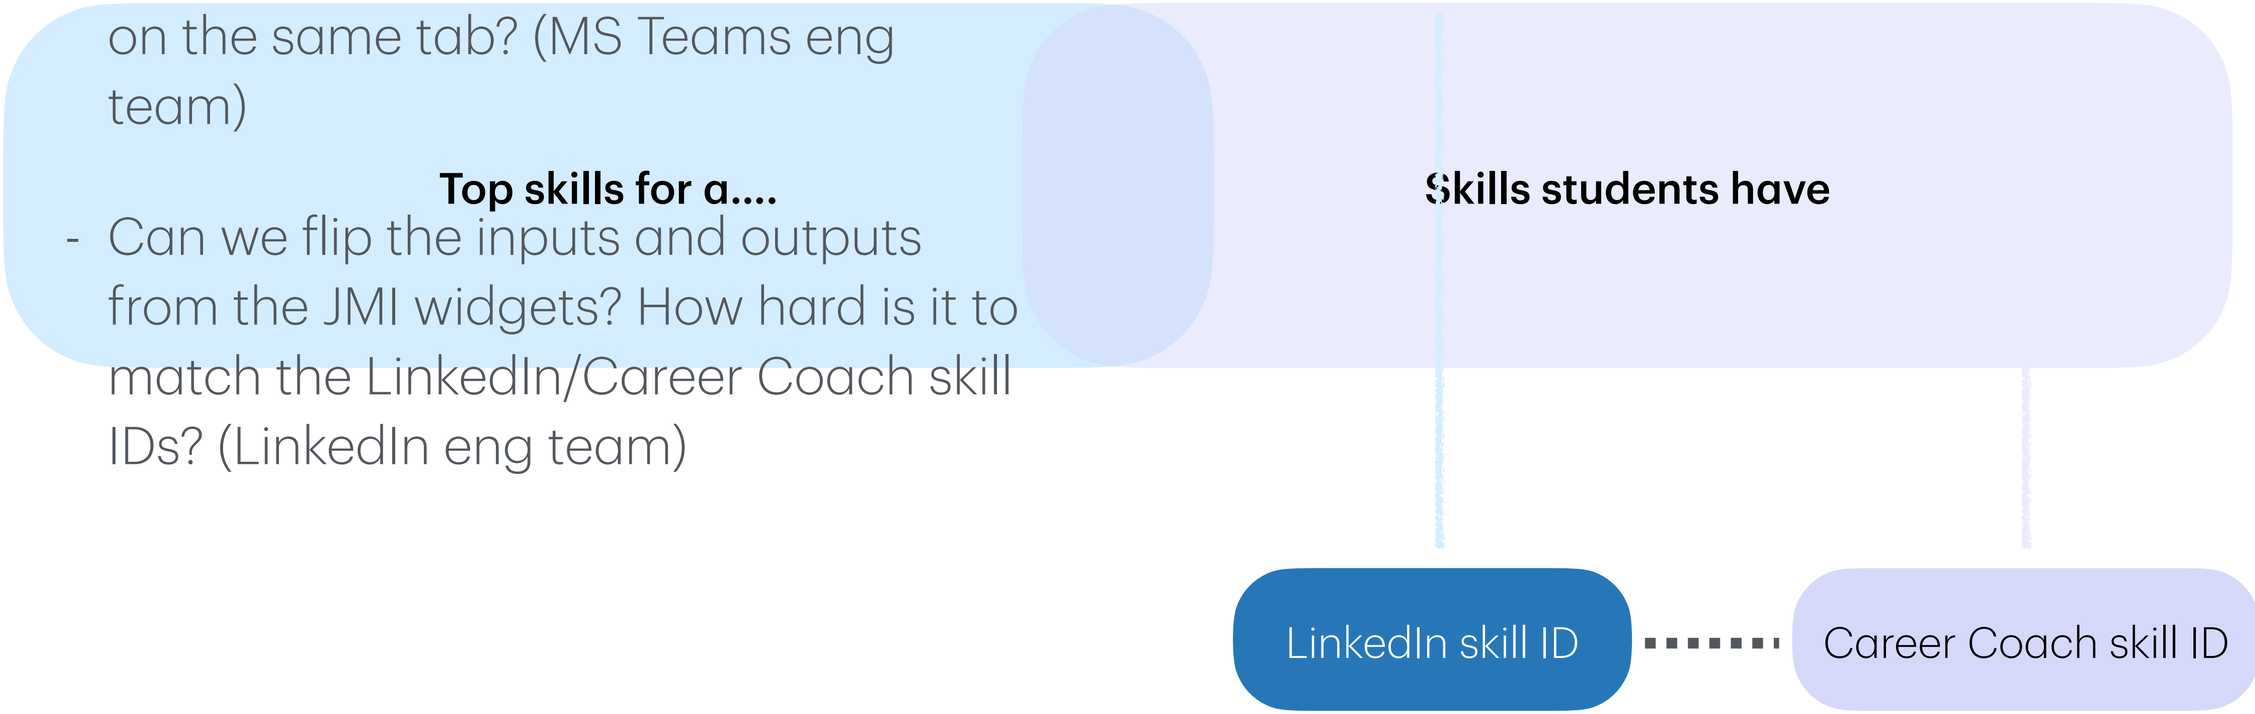

Top employers

Top careers

Where design hit reality

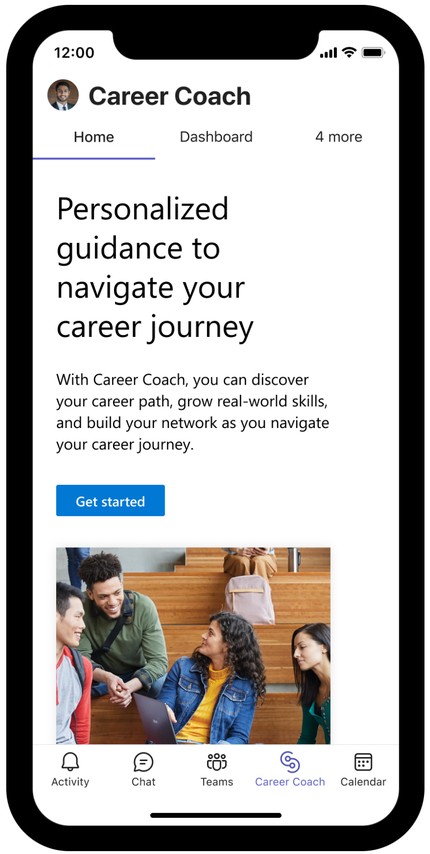

Tradeoffs because of Technical limitations:

- Can we have JMI and student insights on the same tab? (MS Teams eng team)
- Can we flip the inputs and outputs from the JMI widgets? How hard is it to match the LinkedIn/Career Coach skill IDs? (LinkedIn eng team)

The tradeoff

We can’t reverse the inputs/outputs in JMI (LinkedIn) but can we in Career Coach?

Outcome

Showing Insights work on customer calls led to **three new universities signed** before GA launch. Huge market differentiator

Increased usage of LinkedIn's JMI Economic graph by **32%**

LinkedIn agreed to work on combining ID work; shared long term goals

Increase active sessions for faculty (up **20%**)
